

Streamline Facility Maintenance

Assets and equipment that break down frequently, require heavy maintenance costs, and consistently under-perform are a drain on your business, and your maintenance team. Not only do these assets cause unnecessary parts and tool usage, and labor investment; they can also result in crippling downtime. If you are in the business of production, you know time is money, and every second could mean hundreds, if not thousands, of hard earned dollars lost.

Avoiding these issues can come down to adequate preventive maintenance protocols enacted with consistency throughout your facility. To create these protocols, you need a system that is easy to use and intuitive, while having the power to handle your important procedures in a streamlined, mobile environment. With SOMAX you increase your asset lifespan by gaining on-demand access to crucial information. SOMAX is built to be mobile; with dedicated apps for smart phones and tablets, your team has real-time data to work from, ensuring that maintenance procedures are followed and documented on-time, every time.

SOMAX CMMS & EAM help you:

- Reduce downtime on assets and equipment
- Coordinate management and maintenance efforts
- Collaborate across multiple departments
- Streamline project management, workflow, and purchasing

SOMAX CMMS offers actionable information regarding your facility and its components.

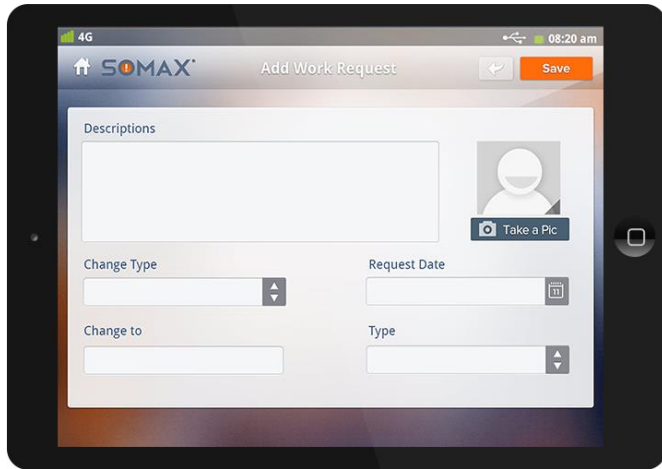

Collaborate in Real Time

SOMAX goes beyond analytics in delivering actionable information. Custom alerts and notification preferences allow users to receive only the alerts for assets and equipment they choose to. No more wading through a pile of unnecessary data just to ensure scheduled work orders are completed, no more sifting through purchase order after purchase order to ensure needed parts are received. With the SOMAX newsfeed your information is delivered directly to you, on your PC or mobile device.

Projects can be planned, budgeted, purchased for, completed, and inspected within one system, across any number of sites, creating a single, standardized structure which eliminates confusion, and synchronizes multiple moving parts with ease.

Go Mobile

With SOMAX Mobile, every project can be managed remotely, from any device. Whether you're using our native apps or working in our full application on your desktop, laptop, smart phone or tablet, you will be in a cloud-connected environment, which means your information is always live and information updates occur instantly. Unchain from your desk, increase employee uptime by offering your team a mobile solution that is user-friendly and intuitive.

Total Requester Awareness

With SOMAX Mobile work requests, your tenants, students, and non-maintenance employees can input work requests in a simple, user-friendly app that they can download straight to their phone or tablet. Create Total Tenant Awareness for residential, educational, and hospitality complexes.

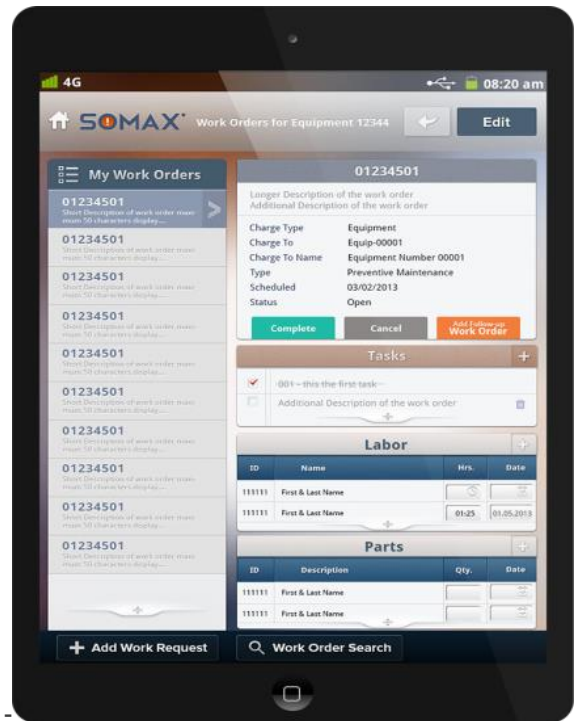

SOMAX Mobile:

- Create, edit, and complete work orders on mobile devices
- Generate work requests from our user-friendly mobile app
- Unchain yourself and your team from your desks

Keep Your Crew in the Field

Create and close work orders with one finger, snap pictures of necessary work directly from the SOMAX app, field work requests from other departments, staff, or tenants instantly, providing peace of mind for everyone that works or lives in your facility.

No more waiting around for your maintenance and management personnel to get back to a desk to create work orders, no more overtime inputting work order data. Give your maintenance crew the tools they need.

Join Our Growing Team Today

Whether your business is manufacturing, retail, agriculture, housing, hospitality, healthcare, food & beverage production and processing, recycling, education, energy, defense, or government and the public sector, SOMAX has a solution that fits your needs and will fit within your budget.
